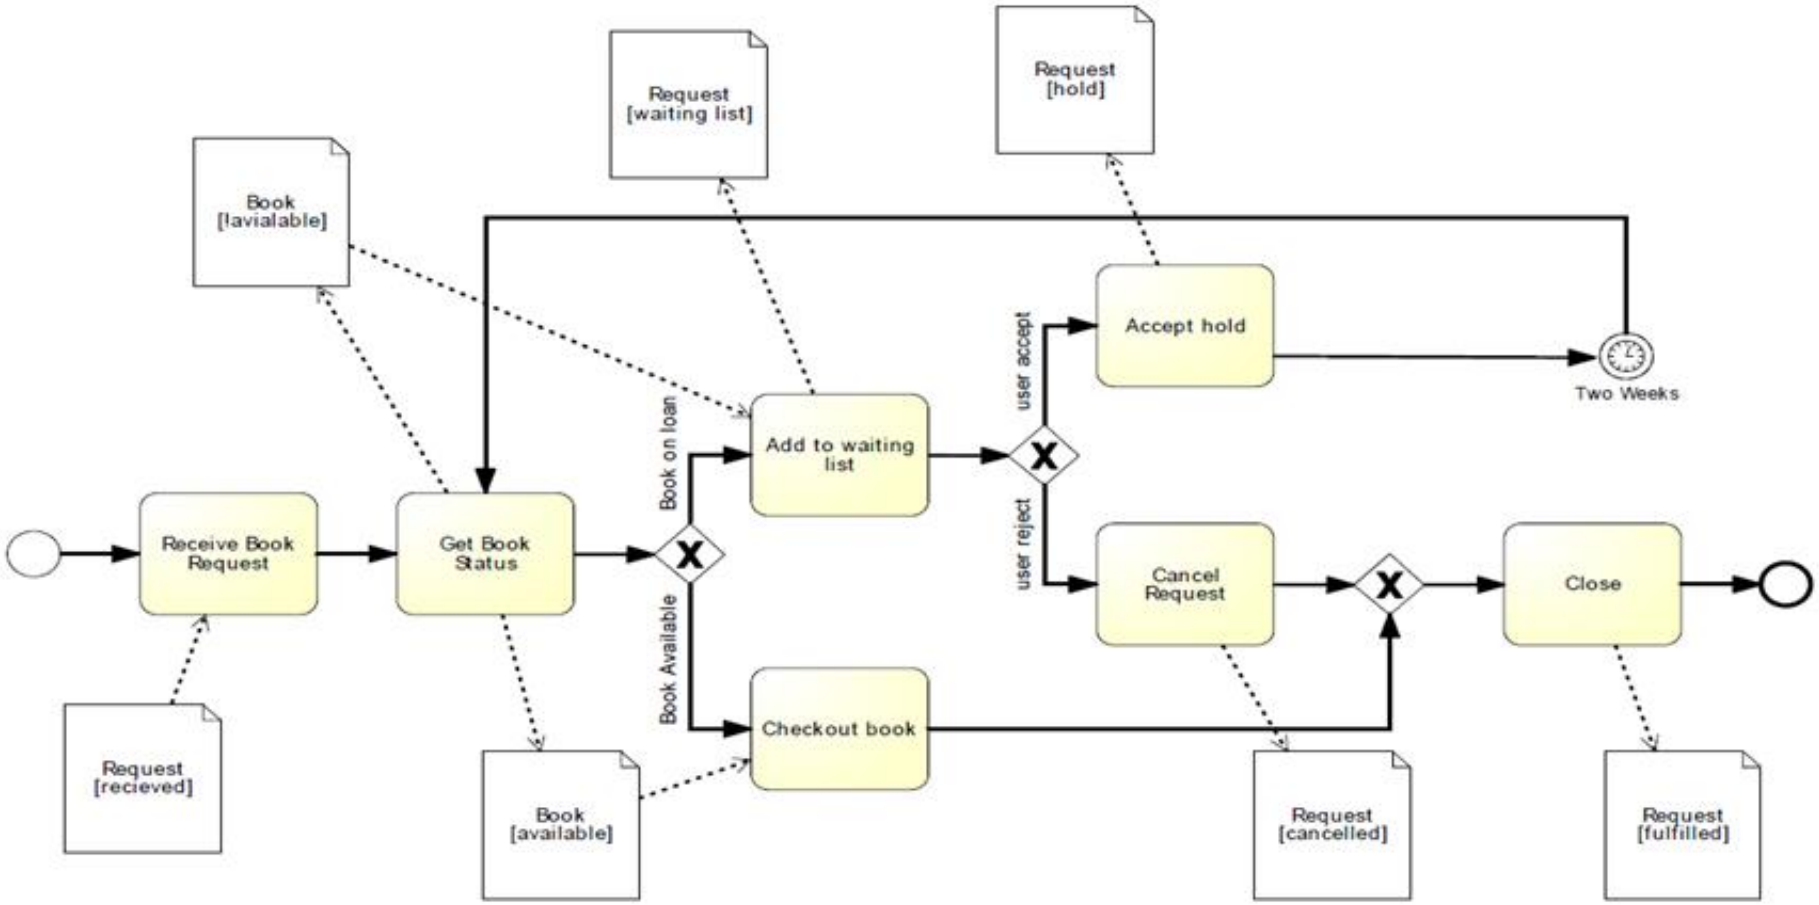
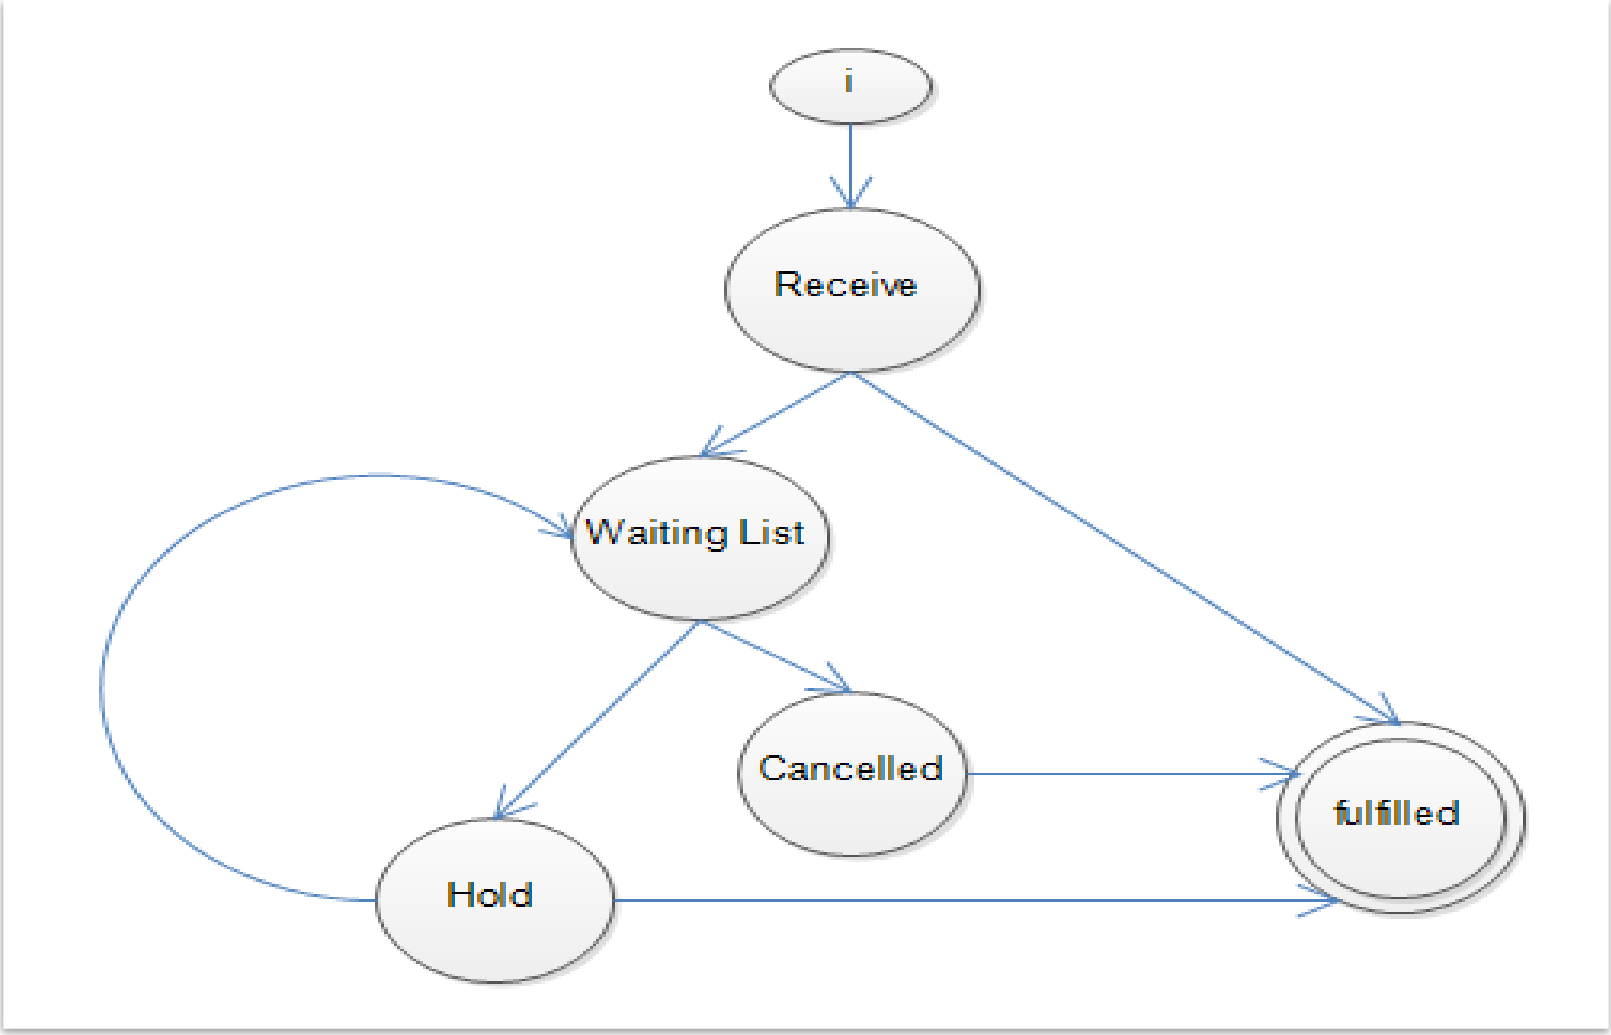
BPMN
Data Objects, Compliance Checking And Petri net Workflow Soundness

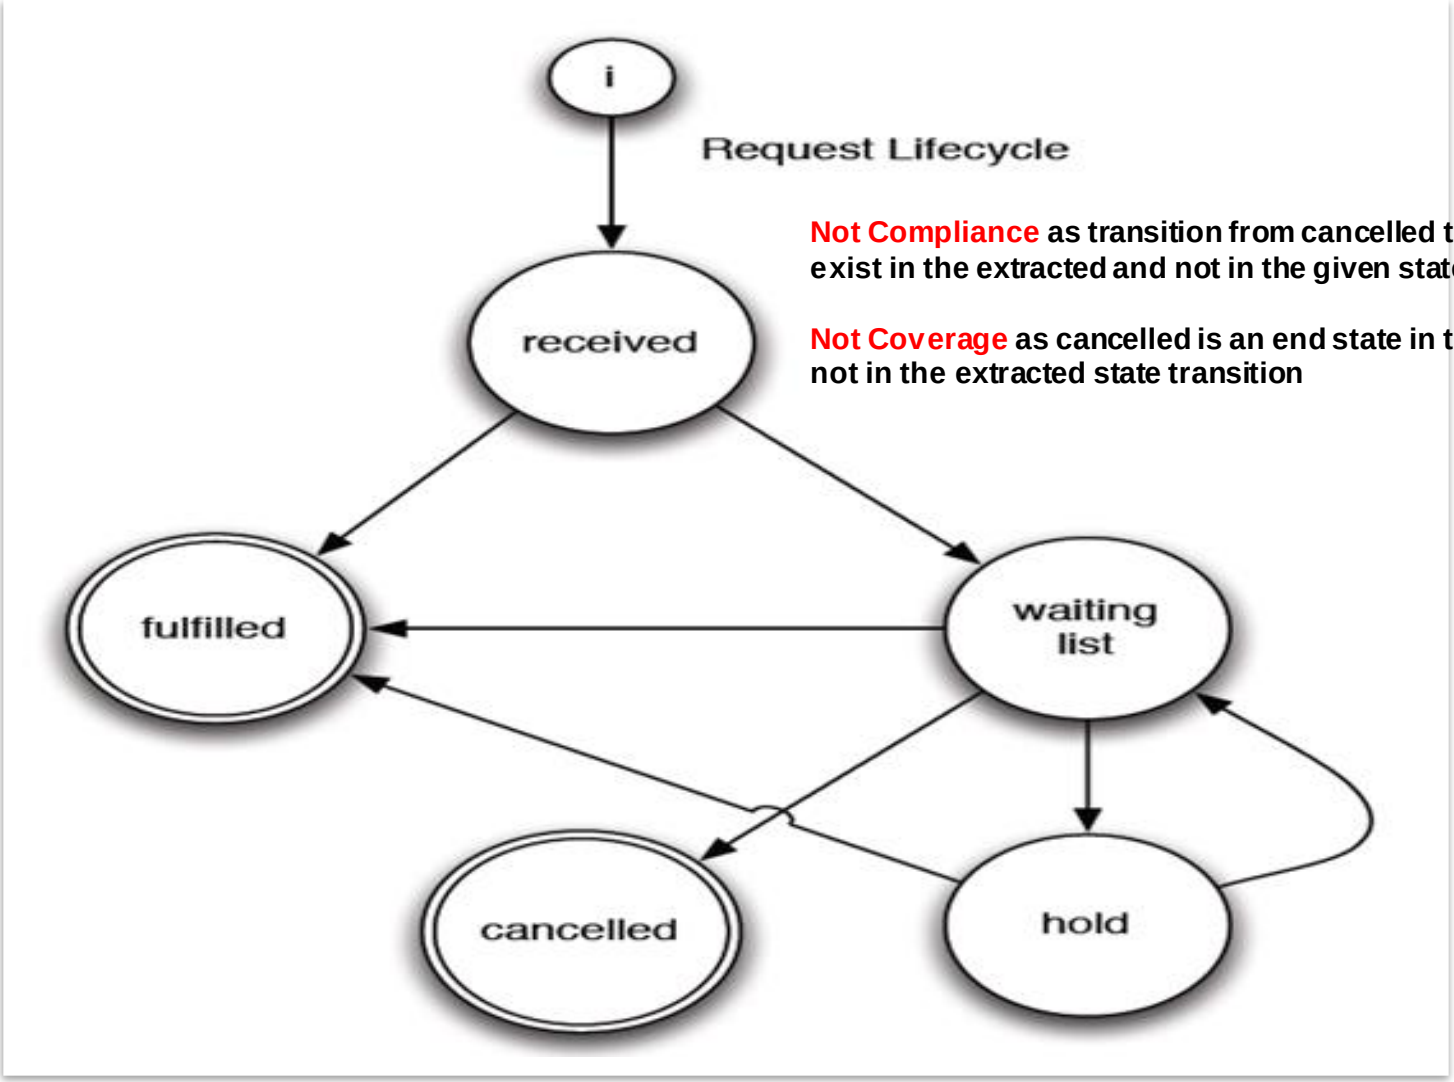
Exercise 1 With Data Objects



Extracted State Transition Diagram (Request)



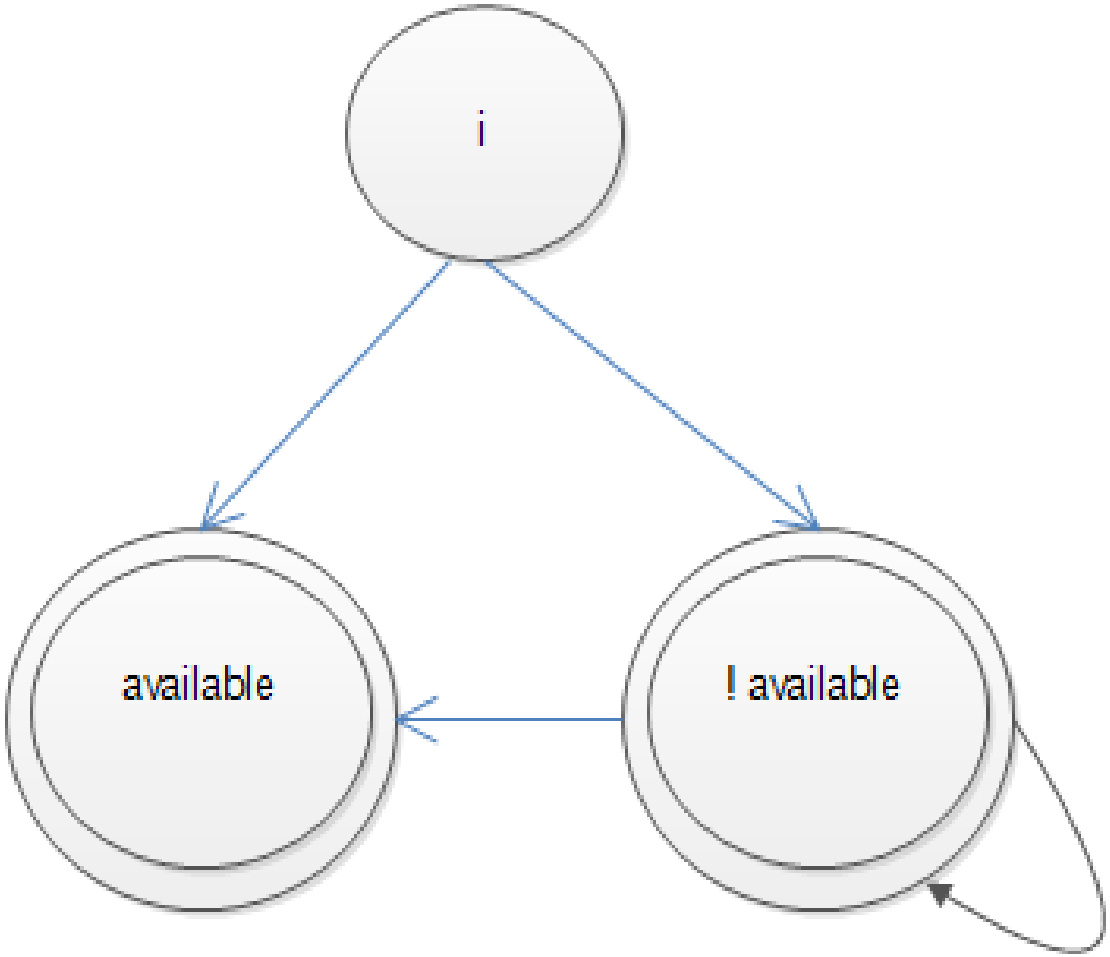
The given State diagram from (Request) object



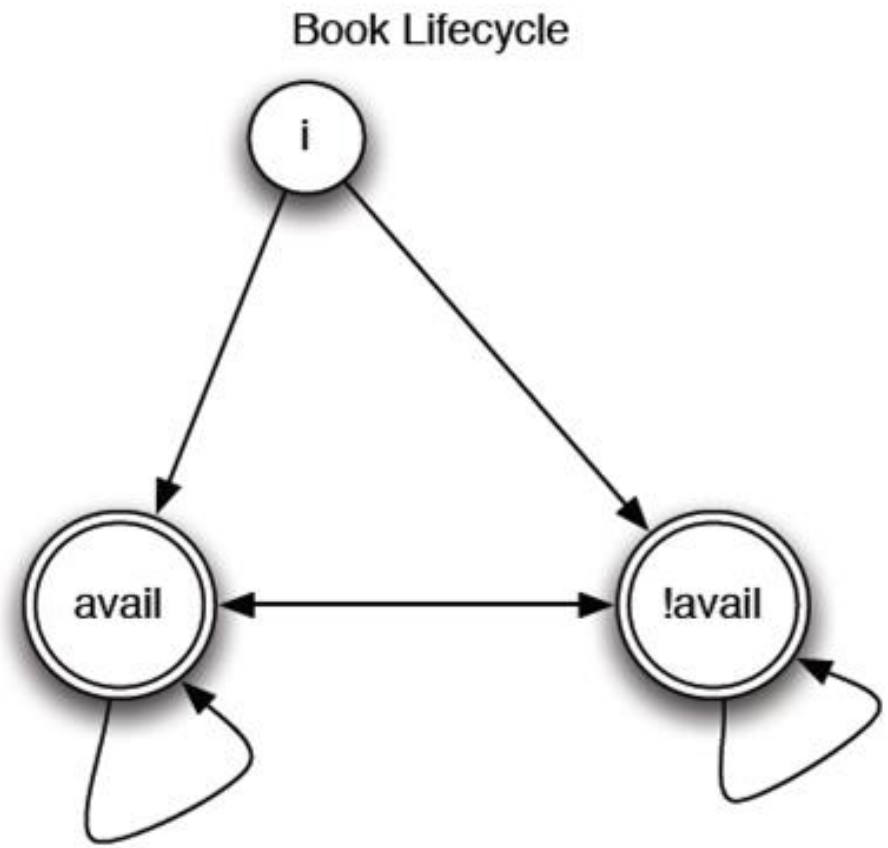
Not Compliance as transition from cancelled to fulfilled exist in the extracted and not in the given state transition

Not Coverage as cancelled is an end state in the given and not in the extracted state transition

Extracted State Transition Diagram(Book)

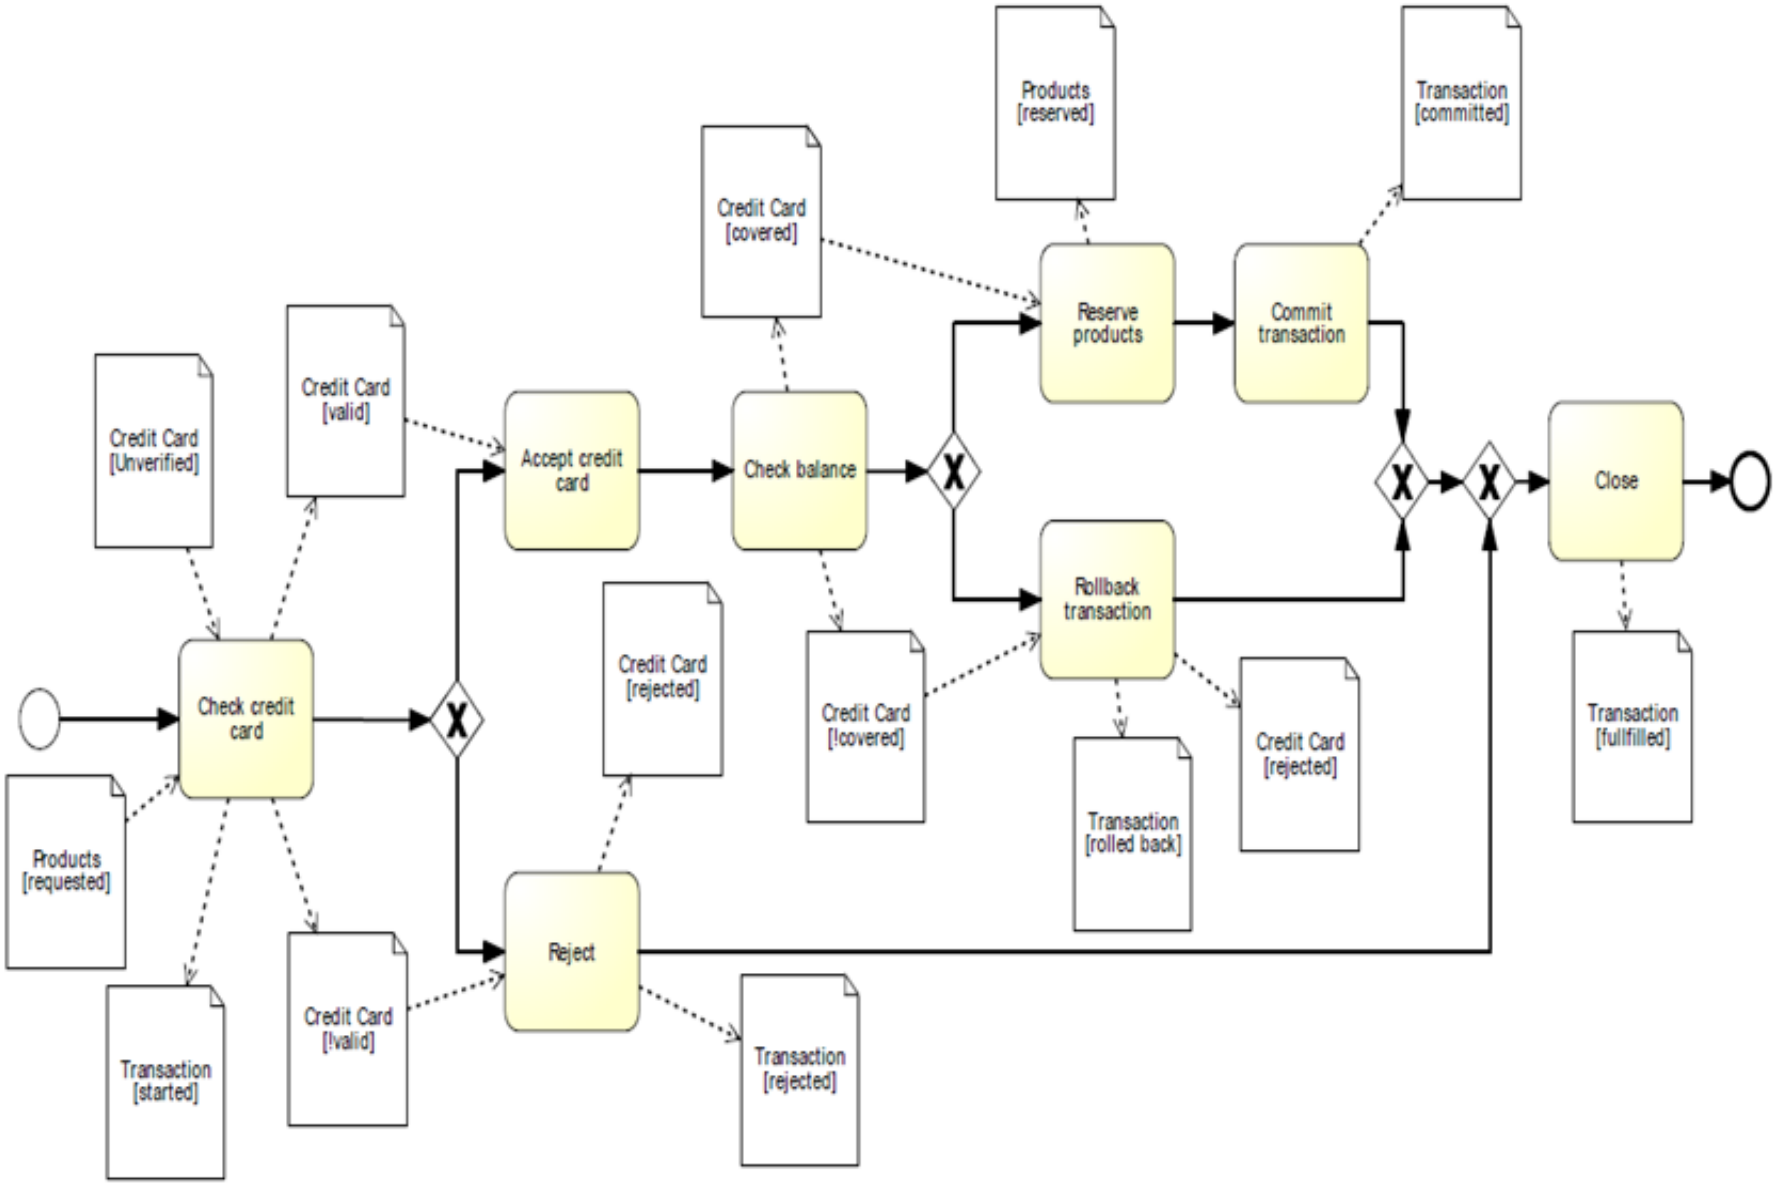


The given State Transition Diagram (Book)



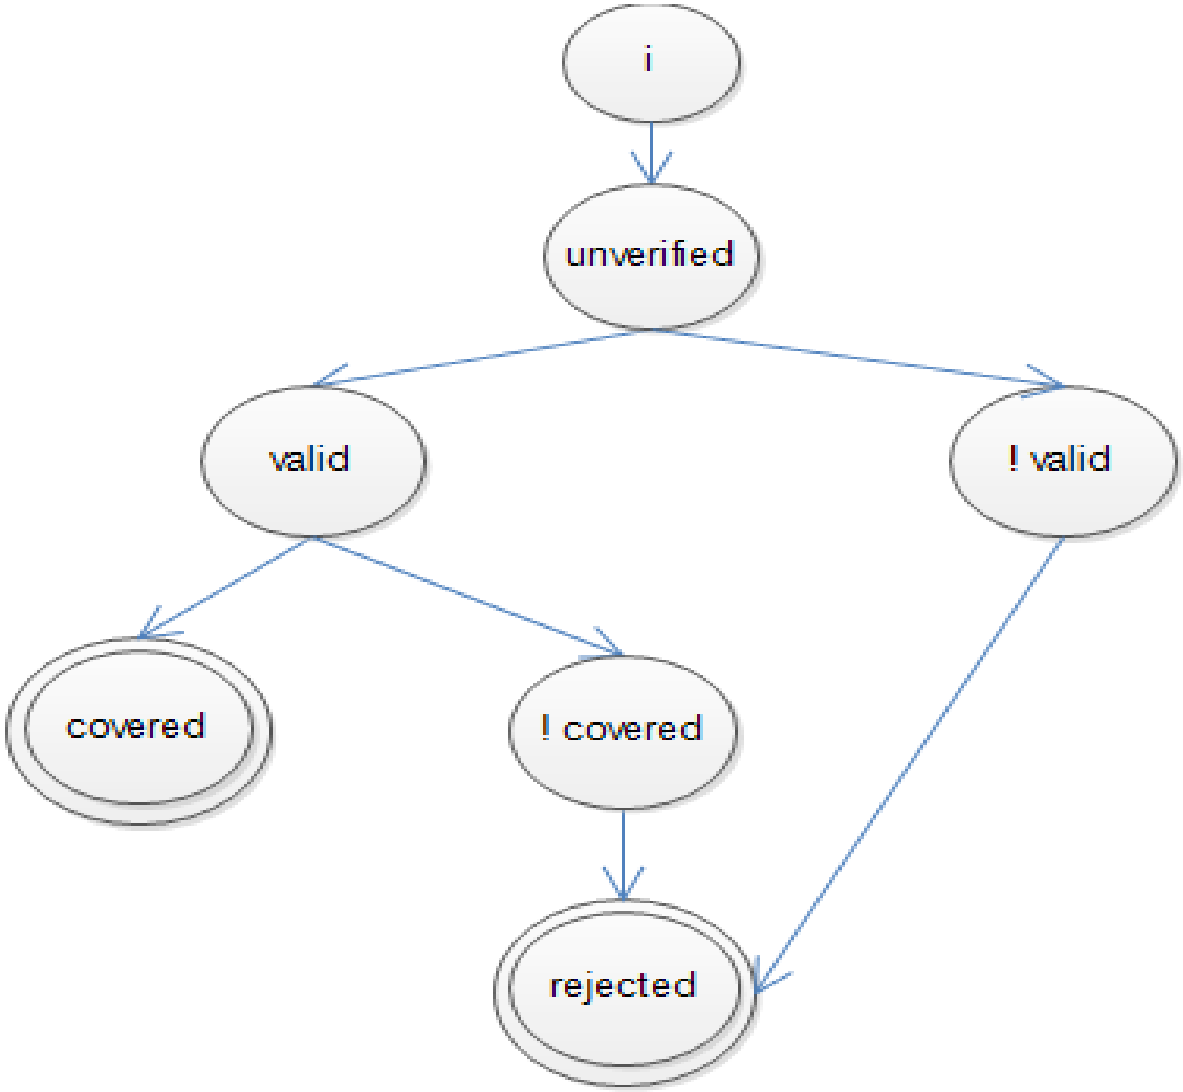
Compliance but not Coverage our BPMN doesn't cover the state transition from available to !available nor the cycle of available.

Example 2

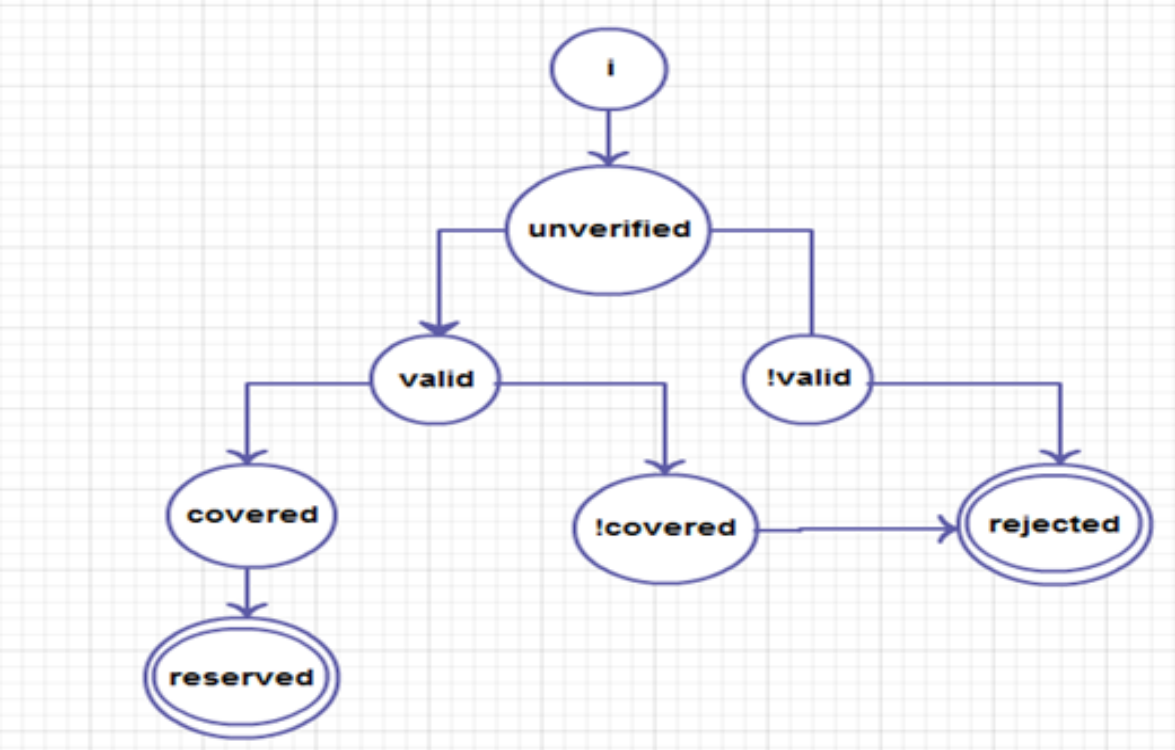


Products [reserved]
Transaction [committed]
Credit Card [covered]
Reserve products
Commit transaction
Credit Card [Unverified]
Credit Card [valid]
Accept credit card
Check balance
Close
Rollback transaction
Credit Card [rejected]
Check credit card
Credit Card [!covered]
Transaction [fullfilled]
Credit Card [rejected]
Transaction [rolled back]
Products [requested]
Reject
Transaction [started]
Credit Card [!valid]
Transaction [rejected]

(Credit card)- Extracted State Transition Diagram



The given state for credit card object



It's not Compliance as "covered" state is not an end state in the given State Diagram,
It's not Coverage as "reserved" state is an extra state not exists in abstracted object lifecycle, also "reserved" end state it's not a part of end states in the abstracted object lifecycle.

Thank You
